CONCENTRATION RETAINER TOP II (CRT II)

Introducing the **Concentration Retainer Top II (CRT II)**, an affordable solution for the separate storage and preservation of your alcohol reference solution. The CRT II, is molded from durable polypropylene and comes equipped with a flat gasket. This design guarantees an airtight seal, safeguarding your alcohol solution from volatile dilution and maintaining its concentration. Experience the blend of economy and efficiency with the CRT II.

The benefits of the CRT II include:

- Reduction of solution waste by allowing storage between uses.
- Prolongs the life of the simulator and reduces maintenance cost by allowing the simulator to air dry between uses.
- Allows a single simulator to be used to test/calibrate at multiple solution concentrations.

The CRT II assembly includes the CRT II, 500 mL laboratory glass container, and flat gasket.
